DESCRIPTORS: *Polymers, Deterioration, Mechanical properties, Oxidation, *Plastics, Temperature, Antioxidants.

Natural and synthetic polymers containing only carbon and hydrogen are subject to autoxidation, which limits their life and utility, unless countered by suitable means. In the present study, the fundamental aspects of the phenomenon (the kinetics, energy of activation) are discussed, as well as the methods used in studying it, the effects (of autoxidation) on the mechanical properties of the polymers, and means for combatting it (antioxidants).
